

The Facts About HB 4561

Opponents say: HB 4561 will limit the updating of the state's construction code to once every six years.

FACT: The flexible code cycle in HB 4561 gives the state the option to update Michigan's construction code either every three years or every six years as they believe is necessary.

Opponents say: The flexible code cycle in HB 4561 will stop new products and new technologies from being introduced, sold and used in Michigan.

FACT: *HB 4561 (H-1) contains language that automatically allows for the use of new products and technologies provided for in an interim edition of one of the listed codes used by the state without any further need for testing or state approval, even if the state skips that edition.*

Opponents say: HB 4561 will prevent the state from adopting new codes or standards.

FACT: HB 4561 does not block the adoption of new codes and standards. It does require any future additions of unlisted codes to the mandatory construction codes be approved by the state legislature and not through the administrative rules process. This safeguards against other codes and standards being substituted for an existing code or standard or adopted without legislative approval.

Opponents say: The flexible code cycle in HB 4561 will put us out of step with the rest of the country which adopts the newest code every three years.

FACT: The truth is actually quite the opposite. HB 4561 will bring Michigan in step with the rest of the country. 35 other states and the District of Columbia already are on a flexible code cycle including all of our neighboring states. Indiana is on the 2006 International Building Code, the 2003 International Residential code, the 2006 International Mechanical Code, the 2008 NEC and the 1997 Uniform plumbing code. Minnesota is on the 2006 I-codes. Ohio is on the 2006 I-codes. Pennsylvania is on the 2009 I-codes. New York's 2010 codes are based on the 2006 I-codes. But local governments in NY can use a different code. Albany is on the 2000 I-codes. New York City is on the 2003 I-codes. Syracuse is on the 2002 edition of the state code which is based on the 2000 edition of the I-codes.

Illinois also allows local adoption of codes and at least 30 different construction codes are in use in Illinois ranging from the 1993 state plumbing code to the 1996 BOCA Building Code to the 2006 International Building Code.

And the National Building Code of Canada is only updated once every five years.

For more information on what codes are used where,
look behind the Reed Construction Data code list tab.

**Reed Construction Data List of
Construction Codes
Currently in Use by State**

5

**SUBSTITUTE FOR
HOUSE BILL NO. 4561**

A bill to amend 1972 PA 230, entitled
"Stille-DeRossett-Hale single state construction code act,"
by amending section 4 (MCL 125.1504), as amended by 2004 PA 584.

THE PEOPLE OF THE STATE OF MICHIGAN ENACT:

1 Sec. 4. (1) The director shall prepare and promulgate the
2 state construction code consisting of rules governing the
3 construction, use, and occupation of buildings and structures,
4 including land area incidental to the buildings and structures, the
5 manufacture and installation of building components and equipment,
6 the construction and installation of premanufactured units, the
7 standards and requirements for materials to be used in connection
8 with the units, and other requirements relating to the safety,
9 including safety from fire, and sanitation facilities of the

1 buildings and structures.

2 (2) The code shall consist of the international residential
3 code, the international building code, the international mechanical
4 code, the international plumbing code, **THE INTERNATIONAL EXISTING**
5 **BUILDING CODE, AND THE INTERNATIONAL ENERGY CONSERVATION CODE**
6 published by the international code council ~~,-AND~~ the national
7 electrical code published by the national fire prevention
8 association, ~~and the Michigan uniform energy code~~ with amendments,
9 additions, or deletions as the director determines appropriate. **THE**
10 **DIRECTOR MAY ADOPT ALL OR ANY PART OF THESE CODES OR THE STANDARDS**
11 **CONTAINED WITHIN THESE CODES BY REFERENCE.**

12 (3) The code shall be designed to effectuate the general
13 purposes of this act and the following objectives and standards:

14 (a) To provide standards and requirements for construction and
15 construction materials consistent with nationally recognized
16 standards and requirements.

17 (b) To formulate standards and requirements, to the extent
18 practicable in terms of performance objectives, so as to make
19 adequate performance for the use intended the test of
20 acceptability.

21 (c) To permit to the fullest extent feasible the use of modern
22 technical methods, devices, and improvements, including
23 premanufactured units, consistent with reasonable requirements for
24 the health, safety, and welfare of the occupants and users of
25 buildings and structures.

26 (d) To eliminate restrictive, obsolete, conflicting, ~~and-OR~~
27 unnecessary construction regulations that tend to increase

1 construction costs unnecessarily or restrict the use of new
2 materials, products, or methods of construction, or provide
3 preferential treatment to types or classes of materials or products
4 or methods of construction.

5 (e) To ~~insure~~ **ENSURE** adequate maintenance of buildings and
6 structures throughout this state and to adequately protect the
7 health, safety, and welfare of the people.

8 (f) To provide standards and requirements for cost-effective
9 energy efficiency that will be effective April 1, 1997.

10 (g) Upon periodic review, to continue to seek ever-improving,
11 cost-effective energy efficiencies.

12 (h) ~~The development of~~ **TO DEVELOP** a voluntary consumer
13 information system relating to energy efficiencies.

14 (4) The code shall be divided into sections as the director
15 considers appropriate including, without limitation, building,
16 plumbing, electrical, and mechanical sections. The boards shall
17 participate in and work with the staff of the director in the
18 preparation of parts relating to their functions. Before the
19 promulgation of an amendment to the code, the boards whose
20 functions relate to that code ~~shall be permitted to~~ **MAY** draft and
21 recommend to the director proposed language. The director shall
22 ~~give consideration to~~ **CONSIDER** all submissions by the boards.
23 However, the director has final responsibility for the promulgation
24 of the code.

25 (5) ~~The code may incorporate the provisions of a code,~~
26 ~~standard, or other material by reference. The director shall add,~~
27 ~~amend, and rescind rules to update the code not less than once~~

1 ~~every 3 years to coincide with the national code change cycle. THE~~
2 **DIRECTOR SHALL ADD, AMEND, AND RESCIND RULES TO UPDATE THE CODE NOT**
3 **LESS THAN ONCE EVERY 6 YEARS OR MORE THAN ONCE EVERY 3 YEARS.**

4 (6) Before the Michigan building code, the Michigan
5 residential code, the Michigan plumbing code, the Michigan
6 mechanical code, the Michigan uniform energy code, and the Michigan
7 rehabilitation code may be enforced, the director shall make each
8 Michigan-specific code available to the general public for at least
9 45 days in printed, electronic, or other form that does not require
10 the user to purchase additional documents or data in any form in
11 order to have an updated complete version of each specific code,
12 excluding other referenced standards within each code. This
13 subsection does not apply to any code effective before April 1,
14 2005. **IF A LISTED CODE IS UPDATED ON A 6-YEAR CYCLE, USE OF A**
15 **MATERIAL, PRODUCT, METHOD OF MANUFACTURE, OR METHOD OR MANNER OF**
16 **CONSTRUCTION OR INSTALLATION PROVIDED FOR IN AN INTERIM EDITION OF**
17 **THE RELEVANT CODE IS ACCEPTABLE THROUGHOUT THIS STATE BUT SHALL NOT**
18 **BE MANDATED BY AN ENFORCING AGENCY OR ITS BUILDING OFFICIAL OR**
19 **INSPECTOR.**

Q&A HB 4561

1. What's the reason for moving from three-year code promulgation cycle to a flexible promulgation cycle?

There are two reasons for going to a flexible cycle: flexibility and the cost of updating the code every three years.

2. Won't moving from a three-year to a flexible cycle mean some manufacturer's products won't be approved for use in Michigan and consequently can't be sold here?

No. It is not the intent of the code to create a market for someone's product or service. Proprietary products are not recognized in the codes. Mentioning thousands of such products would be unmanageable and certainly unfair to complying products not mentioned. The codes include minimum design/performance requirements and in some instances prescriptive guidance. They also set forth limitations and conditions of use. Products must meet performance and manufacturing requirements to "comply with the code."

As an example, although it's not specifically recognized in Michigan's 2009 code, Dow's revolutionary POWERHOUSE™ Solar Shingle complies with all of the 2009 code requirements and is being used across Michigan including on Michigan's First Zero Energy Home built by Cobblestone Homes in Bay City.

Product approval is not solely a function of the national model codes and it never was. In Michigan we currently have two different but complementary methods of gaining product approval even in the middle of a code's being enforced. And HB 4561 contains a third, automatic, method for gaining product approval between adopted editions of the code.

FIRST, MCL 125.1521 of the Single State Construction Code Act sets out a very specific much-used method to "Petition for approval of materials, products and methods; testing and evaluation; certificate of acceptability." The language of the law may be found in the document "Approval of materials" attached to this memo. Manufacturers generally use this method because it deals with approval for the entire state.

A 15-page document from the Bureau of Construction Codes listing all "materials, products and methods that have been approved by the Construction Code Commission from January 1, 1999, to present," has been attached. These approvals are done by the State Construction Code Commission which meets every three months.

The 2009 SCCC product approval for the TEC HydraFlex Waterproofing Crack Isolation Membrane manufactured by Specialty Construction Brands out of Palatine, Illinois has also been attached. Please note the approval specifies all requirements of the Michigan

Plumbing Code will apply to the use of this product and the installation of this product must be done in accordance with the manufacturer's specifications.

***SECOND**, the language from Section 104 of the Michigan Residential Code and the Michigan Building Code regarding the approval on a jurisdiction-by-jurisdiction basis of "alternative materials, design and methods of construction and equipment" creates a second, less frequently used, method for gaining product approval. It is normally builders, not manufacturers, who use the jurisdiction-specific provision for alternative materials, designs and methods.*

***THIRD**, the MAHB has agreed to add the following amendment to the legislation. "If the code is updated on a 6-year cycle, use of a material, product, method of manufacture, or method or manner of construction provided for in an interim edition of the relevant code is acceptable throughout this state but shall not be mandated by an enforcing agency or its building official or inspector."*

This amendment will provide for the automatic acceptability of those products provided for by an edition of the model code used by the state even when the state does not adopt that edition.

3. Won't moving from a three-year code adoption cycle to a flexible adoption cycle "torpedo" the creation of new technology and cause new energy technology companies to leave Michigan?

No. Those who make that argument would have you believe it wasn't tax abatements, training grants, and other incentives that got high-tech firms to locate in Michigan. And our highly skilled workforce, nationally-recognized research universities and superb quality of life had nothing to do with it either. This argument says the reason all these high-tech firms came to Michigan and will stay in Michigan is because we update our construction codes every three years.

If that's correct, couldn't we attract even more companies by updating our construction codes every year? And how do Minnesota, Wisconsin, Indiana, Illinois and Ohio attract these companies when they have no mandatory schedule for updating their construction codes other than to do so when they feel it's needed?

The truth is these decisions are driven by location, the labor market, availability of utilities, local community considerations, the availability of financing and tax and regulatory policies, not by a state's code update schedule. Michigan's code cycle isn't why GM Ventures invested \$4.2 million in Sakti3, Inc, a lithium-ion battery developer based in Ann Arbor.

*Need more proof? **Look no farther than this article from the website of Dow Chemical in Midland, Michigan.***

"Attracting New Investment to Michigan

Dow is taking a leadership role in working to revitalize Michigan's economy. One way the company is trying to do this is by attracting new investment to Michigan Operations, Dow's largest manufacturing site in Michigan.

To remain globally competitive, the site continues to make the financial and cultural changes necessary to attract business investments. Since the late 1990s, site leaders have developed and implemented a strategic plan to expand the skills of our workforce; improve environmental, health, and safety and operational performance; and lower costs to make the site's operations globally competitive. This effort has resulted in Michigan Operations attracting approximately \$500 million in new investments and the creation or retention of more than 400 full-time jobs since 2004.

Businesses that make Michigan Operations the site of choice are attracted by:

- **Our capability to run complex chemistry processes**
- **Employees who are flexible and ready for change, and a labor contract that enables flexibility**
- **Our strong technical resource base**
- **World class research and development and analytical capability**
- **Unique regulatory expertise**
- **Ability to run plants that meet current good manufacturing practices (cGMP)**
- **Full service environmental capabilities**
- **An excellent track record for start-up with new molecules"**

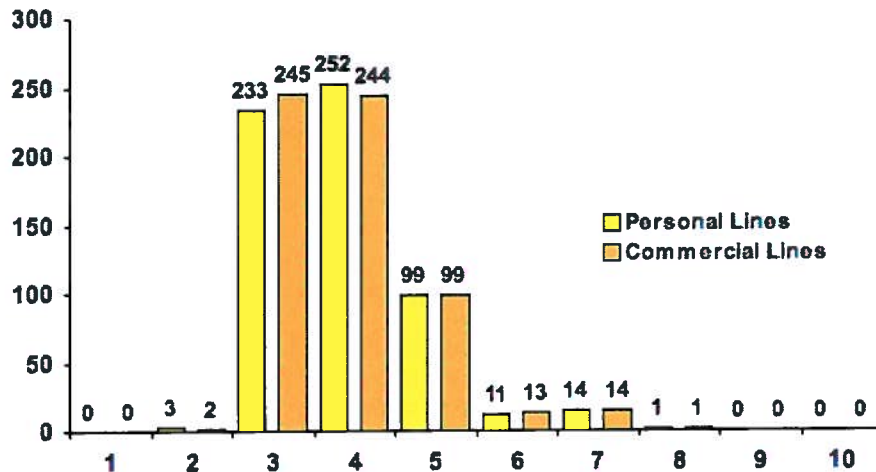

You won't find a word in there about a three-year code cycle attracting new investment or companies to Michigan.

4. Won't moving from a mandatory three-year code cycle to a flexible code cycle hurt home owner and business property insurance rates in Michigan because we'll get a lower building code effectiveness grade from the Insurance Services Office's Building Code Effectiveness Grading Schedule?

No. The information on the next page comes from the ISO website and may help clarify the lack of practical effect of a flexible cycle versus a three-year cycle on ISO BCEGS ratings.

“Michigan Distribution of Communities by BCEGS Class

Number within Classification

The personal lines classification addresses building code adoption and enforcement for 1- and 2-family dwellings. The commercial lines classification is for all other buildings.”

<http://www.isomitigation.com/bcegs/1000/graphs/MI.html>

Since Michigan has a Single State Construction Code Act mandating every local building department use the same state-promulgated code without any local changes allowed, and since Michigan has had one statewide code since 1999, why aren't all of the communities given the same grade? The answer is found on another section of the ISO's BCEGS website.

: <http://www.isomitigation.com/bcegs/0000/bcegs0001.html>

“What is a community's classification based on?

A community's classification is based on:

Administration of codes, including

- building-code edition in use
- modification of the codes
- zoning provisions to mitigate natural hazards
- training of code enforcers
- certification of code enforcers

- incentives for outside education/certification
- building officials' qualifications
- contractor/builder licensing and bonding
- public-awareness programs
- participation in code-development activities and the appeal process

Review of building plans, including:

- staffing levels
- qualifications
- level of detail of plan review
- performance evaluations
- review of plans for one- and two-family dwellings, multifamily dwellings, and commercial buildings

Field inspections, including:

- staffing levels
- qualifications
- level of detail of inspections
- performance evaluations
- final inspections
- issuance of certificates of occupancy

In addition, ISO collects underwriting information, including natural hazards common to the area, number of inspection permits issued, number of inspections completed, the building department's funding mechanism and date of establishment, size of the jurisdiction and population, and fair market value of all buildings”.

You'll note that what code edition is in use is only one of 21 different classification categories used to arrive at an ISO BCEGS grade and not the most important one at that.

The information below is from the League of Minnesota Cities Insurance Fund study on the effects of ISO BCEGS on municipal insurance rates.

“Staffing is the most important single factor, and accounts for over 60% of the total rating. The BCEGS looks at whether the city has enough code enforcement staff for the numbers of permits, plan reviews, and inspections the city handles; the staff's background and experience; the ongoing training staff receives; and the city's practices in supervising and evaluating the code enforcement

The recommended credits from ISO don't apply to the entire property premium; they're applied only to the “extended perils” portion of the premium. Every insurance company sets its own rates, and it is the decision of the insurance company to adopt ISO's recommended premium credit schedule.”

Several other points from the League of Minnesota Cities Insurance Fund study are worth noting:

“• Even with the best possible BCEGS rating, the potential premium savings are modest. As an example, a \$150,000 home in a community with the lowest ISO BCEGS rating of 10 would see an estimated premium of \$670 while the same home in a community with ISO’s highest BCEGS rating of 1 would see an estimated premium of \$653, a \$17 savings. A commercial office building worth \$1,000,000 in a 10-rated community would have an estimated premium of \$3,230 while the same office building in a 1-rated community would pay an estimated premium of \$3,121, a savings of \$109.

- Only new construction benefits from the city’s BCEGS rating; existing buildings aren’t affected. In other words, in most cities the city’s BCEGS rating will affect premiums for only a small percentage of the city’s property owners. Theoretically, those buildings that are affected will continue to receive the benefit indefinitely on each future insurance renewal premium.

- Not all insurance companies actually use the BCEGS ratings and credits. Some insurers use BCEGS, but there’s not a lot of information on how many insurers are using it or how they’re implementing it in their rating systems “

5. How does House Bill 4561 create flexibility?”

Michigan’s mandatory three-year cycle forces the department to adopt new editions of the code not because the department believes they are necessary but because they have been published by a private organization that receives revenue from these books. The law currently allows the department no discretion in this matter. HB 4561 allows them to keep the codes in effect for a longer period of time if they choose.

6. Doesn’t HB 4561 actually take away the flexibility of the department to adopt a code by locking them into a six-year cycle so they couldn’t do an update every three years if they felt it was warranted?

Nothing in HB 4561 limits the department to only updating the code every six years. It simply says the department may update the code not more than every three years and not less than every six years. The department can update at three- or six-year intervals as it feels is appropriate.

7. Do all of the codes have to be updated at the same time?

There are seven separate listed codes (Residential, Building, Mechanical, Plumbing, Electrical, Energy and Existing Building) that taken together comprise the State Construction Code. HB 4561 would allow the department the flexibility to update some codes on a three-year cycle and some codes on a six-year cycle as they believe is necessary.

8. Won't going to a flexible cycle harm public safety?

No. A majority of changes made in each edition of the codes are either editorial/administrative/technical in nature or minor changes. Very few changes are substantive.

The 2009 International Residential Code (IRC) which serves as the basis for the Michigan Residential Code had one hundred and twenty-two changes made from the 2006 IRC. Sixty-two (50.8%) of the changes were editorial/administrative/technical in nature. Fifty-four (44.3%) percent were minor. Only six (4.9%) were substantive.

The 2006 edition of this code had one hundred and sixty three changes of which one hundred and fourteen (70%) were editorial/administrative/technical, forty three (26%) were minor and six (4%) were substantive.

The 2003 IRC had ninety seven changes. Fifty nine (61%) were editorial/administrative/technical, thirty four (35%) were minor and 4 (4%) were substantive.

And again, in case of imminent danger to human safety, the department may institute an emergency rule without going through the normal promulgation process.

9. Can you give examples from the 2009 IRC of what change falls into what category?

The 2009 IRC contains a new section entitled "Fire-Resistant Construction." This new section consolidates all of the fire-resistant construction requirements that used to be scattered throughout the IRC. None of these requirements changed, they were just moved to one section of the code to make them easier to find. That's an editorial change.

A new section was added to the 2009 IRC that states that anyone who commences work requiring a permit before they actually receive a permit is subject to a fee established by the applicable governing authority. That's an administrative change.

Certain types of liquid sealants were added as approved duct system sealants to the 2009 IRC. That's a technical change.

The 2009 IRC makes ducts that have spray polyurethane foam applied to their exterior exempt from the requirement to be wrapped with a vapor retarder. That is a minor change.

Carbon monoxide detectors are now required in all new dwelling units which have fuel-fired appliances or an attached garage and in existing homes when work requiring a permit is done. This is a substantive change. This is also a requirement that Michigan has had for several years.

10. Won't moving to a flexible cycle put Michigan out of step with most other states?

No. Thirty-five other states and the District of Columbia have no mandatory code promulgation cycle. Only 14 other states have a mandatory code promulgation cycle. Those cycles range from one to seven years.

11. But aren't those states still updating their codes every three years even though their law doesn't require them to?

No. Some update every three years; some every six; some are using a mixture of codes from 1993 through 2009. But all of them have the flexibility to update their codes as they see fit, a flexibility that Michigan doesn't have.

As an example, Minnesota made the decision in 2009 to not adopt the 2009 I-codes and will stay with the 2006 versions until 2012 when they will revisit the issue. A copy of their memo, issued jointly by the state building official and the state fire marshal, is attached. Michigan does not have that flexibility.

12. You said the other reason for allowing the state flexibility on when to update the code was the cost of updating the code. What did you mean by that and what are the costs?

The easiest portion of the cost of updating every three years is the price of the code books themselves. The cost for new code books in Michigan for the 2009 code cycle is over 13 million dollars, every penny of which goes to the private businesses who create these codes and are the sole source for these published. An analysis of these costs is attached to this memo.

The second set of costs, which are harder to quantify, are the costs to the state for assembling the code review committees and the cost of staff time spent both on the committee work and in the rules process under Michigan's Administrative Procedures Act.

The third set of cost, again difficult to quantify but there nonetheless are the costs to the state, local governments and the regulated/licensed community for education and training on the new codes.

Although it is not a direct financial cost, the three-year code cycle focuses the training/education on the changes between editions as opposed to trying to achieve a better knowledge on some of the more important and existing code requirements. This is particularly true for those licensed/registered professions with continuing education/competency requirements.

13. It can't be that onerous to update the code every three years can it?

The Michigan Building Code, the Michigan Residential Code, the Michigan Rehabilitation Code for Existing Buildings and the Michigan Uniform Energy Code

became effective March 9th of this year. Even before these codes went into effect plans were underway to begin the promulgation of the 2012 codes.

The code development and promulgation in Michigan has become an overly expensive, never-ending process that yields little in terms of safer dwellings for Michigan citizens but is a multi-million dollar bonanza for the organizations that write and sell their books every three years.

The 2009 Michigan Residential Code went into effect in March 9th of this year. But even before the new code was in place, the Bureau of Construction Codes was beginning the state's code promulgation process for the next edition.

Constantly churning codes solely for the sake of adopting the latest version and not because it is needed not only adds unnecessary complexity to the construction process, it can actually harm public safety by not giving either inspectors or contractors a chance to fully understand and implement one set of code changes before having to deal with another.

Cities and counties in Tennessee can become an "exempt" jurisdiction for building code enforcement. As long as the city or county has a code that is current within seven years of the latest edition the jurisdiction will not be affected except to show that it is adequately enforcing its code. Additionally, One- and two- family dwellings and townhouses up to three stories in height built to the 2009 International Residential Code are not required to submit plans for review.

Department of Public Safety – *protecting citizens and communities*
Department of Labor and Industry – *a trusted resource utilized by employees, employers and property owners*

February 23, 2009

To: Code Officials, Design Professionals and Other Interested Parties

Subject: 2009 International Code Adoptions

The 2009 editions of the International Residential Code (IRC), International Building Code (IBC), and International Fire Code (IFC) will be published soon and the Construction Codes and Licensing Division and the State Fire Marshal Division have been discussing this adoption. Given the drastic slowdown of the construction economy, we feel it is not the appropriate time to be updating regulations. The economic based factors include:

- The availability of volunteers for technical advisory committees, given cut backs in code jurisdictions, among design professionals and product suppliers.
- The staff time involved by our state agencies for both the committee work and the rules process under the Administrative Procedures Act.
- The cost of code books and reference materials for townships, cities, counties, state agency offices, design professionals and other industry members.
- The cost of training for builders, designers, code officials and other industry members and the focus of the training on changes rather than other critical concepts.

Based on the above criteria, we will not be moving forward with the adoption of the 2009 IRC, IBC or IFC and will strive to have our advisory committees and the state fire chief's code committee ready to review the 2012 editions of these codes.

Sincerely,

Steve Hernick
State Building Official

Jerry Rosendahl
State Fire Marshal

**STILLE-DEROSSETT-HALE SINGLE STATE CONSTRUCTION CODE ACT
(EXCERPT)
Act 230 of 1972**

125.1521 Petition for approval of materials, products and methods; testing and evaluation; certificate of acceptability.

Sec. 21.

A person may petition the commission to approve the use of a particular material, product, method of manufacture or method or manner of construction or installation. The petition shall be in writing on a form to be prescribed by the commission accompanied by such information and material as the commission may by rule require and by an initial fee. On receipt of the petition, the commission shall cause to be conducted testing and evaluation it deems desirable for the particular material, product, method of manufacture or method or manner of construction or installation. After the testing and evaluation, and after a hearing open to the public in which the results of the testing and evaluation are made part of the record, and the petitioner or any other interested party is allowed to present evidence in support of or against the petition, the commission may reject the petition in whole or in part, may in accordance with procedures established in this act amend the code in such manner as the commission deems appropriate, or may grant a certificate of acceptability for the particular material, product, method of manufacture, or method or manner of construction or installation. A petition shall not be rejected if the application is in proper form and the fees are paid, and if performance of the particular material, product, method of manufacture, or method or manner of construction or installation is adequate for its intended use and consistent with reasonable requirements for the health, safety and welfare of the people of this state. The commission may attach any condition it deems appropriate to a certificate of acceptability. A material, product, method of manufacture, or method or manner of construction or installation shall be acceptable for use throughout this state in accordance with the terms of a certificate of acceptability issued with respect to it. A copy of each certificate of acceptability shall be sent or delivered by the commission to each governmental subdivision, however, failure of the commission to comply with this requirement does not prevent or delay effectiveness of a certificate of acceptability. A certificate of acceptability issued by the commission pursuant to this section shall not be used for advertising purposes.

Section 104

Michigan Residential Code/Michigan Building Code

104.11 Alternative materials, design and methods of construction and equipment.

The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code,

provided that any such alternative has been approved. An alternative material, design, or method of construction shall be approved where the building official find the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, as least the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety.

104.11.1 Research reports.

Supporting data, where necessary to assist in the approval of materials or assemblies not specifically provided for in this code, shall consist of valid research reports from approved sources.

104.11.2 Tests

Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the building official shall have the authority to require tests as evidence of compliance to be made at no expense to the jurisdiction. Test methods shall be specified in this code or by other recognized code standards. In the absence of recognized and accepted test standards, the building official shall approve the testing procedures. Tests shall be performed by an approved agency. Reports of such tests shall be retained by the building official for the period required for retention of public records.

Feature Story:

Is the Economy Threatening Building-Code Effectiveness?

There's been a decade of steady progress toward implementing a single national model building code in all communities across the country. Since the legacy code groups combined forces to release the first international code in 2000, many states have put such model codes into effect. However, even though the pace of new construction has slowed significantly, economic issues still threaten code-adoption and enforcement progress in many areas of the country. Community resources have become overextended, forcing difficult decisions by local officials. And unlike earlier in the decade, when states more rapidly adopted model code version changes released every three years, many states have now slowed their new code edition adoption rate. Since the mid-1990s, ISO has been at the forefront of code monitoring through the Building Code Effectiveness Grading Schedule (BCEGS®) program.

Figure 1:

Current Adoption by Region

This chart shows the percentage of departments adopting the latest edition of the code, the year after publication of a new edition. The spike for the west in 2007 is a result of California adopting a new code for the first time since 1997. 2010 adoption rates decreased in all regions from previous years.

An October 2010 survey by the National League of Cities (NLC) indicated that nearly nine in ten city finance officers are less able to meet their fiscal needs than in 2009. The NLC noted that the weak fiscal condition of the nation's cities will most likely extend for another 18 months to several years. The NLC study also pointed out that cities are instituting hiring freezes, laying off personnel, and delaying or canceling planned infrastructure projects to close funding shortages. Those effects are widespread across municipal governments around the country — and not many agencies or services are exempt, including municipal building-code administration. The effects may extend years down the road.

In many cases, financial woes correlate with severe local and state budget deficits. The NLC study indicates that

Is the Economy Threatening Building-Code Effectiveness?

across the country municipal funding shortfalls are likely to range from \$56 billion to \$83 billion through 2012. *The New York Times* recently reported that the effects are widespread — not just in areas of the country where economic issues have existed for some time. In fact, a number of experts are likening the financial condition of some states to the period preceding the mortgage crisis financial meltdown. To cite just two examples, the city of Harrisburg, Pennsylvania, recently received \$3.6 million from the Commonwealth of Pennsylvania to plug a local severe funding gap; and Tucson, Arizona, is struggling with a \$20 million revenue shortfall in a state already reeling from budget issues.

Local building-code agencies are not immune to budgetary issues. In fact, they may be more at risk because of a common funding model in which financial operations depend entirely on permit fees. With that model, budgets are "front-loaded" so that fees paid at the beginning of each project must fund future activities, from plan review and inspections — up to and including issuance of the final certificate of occupancy. New building construction projects can vary in length from just under a year for a one-family dwelling to several years for large and complex commercial structures. Therefore, the revenue received now is critical to fund future operations, making the case for why financial operations of local agencies are an important part of the BCEGS review process.

ISO administers the BCEGS program for the property/casualty insurance industry. Following the property losses from Hurricane Andrew, a working group — consisting of the insurance industry and a number of national associations and agencies, including the International Code Council (ICC), the Federal Emergency Management Agency (FEMA), the National Fire Protection Association (NFPA), and the Institute for Building and Home Safety (IBHS) — formed in 1992. The group's goal was to develop a national program focused on reducing losses from natural hazards.

Since 1995, BCEGS has demonstrated that there are great variations across the country in how communities administer effective building codes. The ISO BCEGS program now evaluates more than 16,700 code jurisdictions serving more than 25,000 communities. ISO — or, in some states, an independent rating bureau (Hawaii, Idaho, Louisiana, Mississippi, and Washington) — collects information about the adoption and enforcement of building codes in each community. ISO or the bureau analyzes the data based on criteria in the BCEGS and assigns a classification — a number from 1 to 10. Class 1 represents superior community commitment to code adoption and enforcement, and Class 10 indicates a community that has earned very few points on many evaluation criteria.

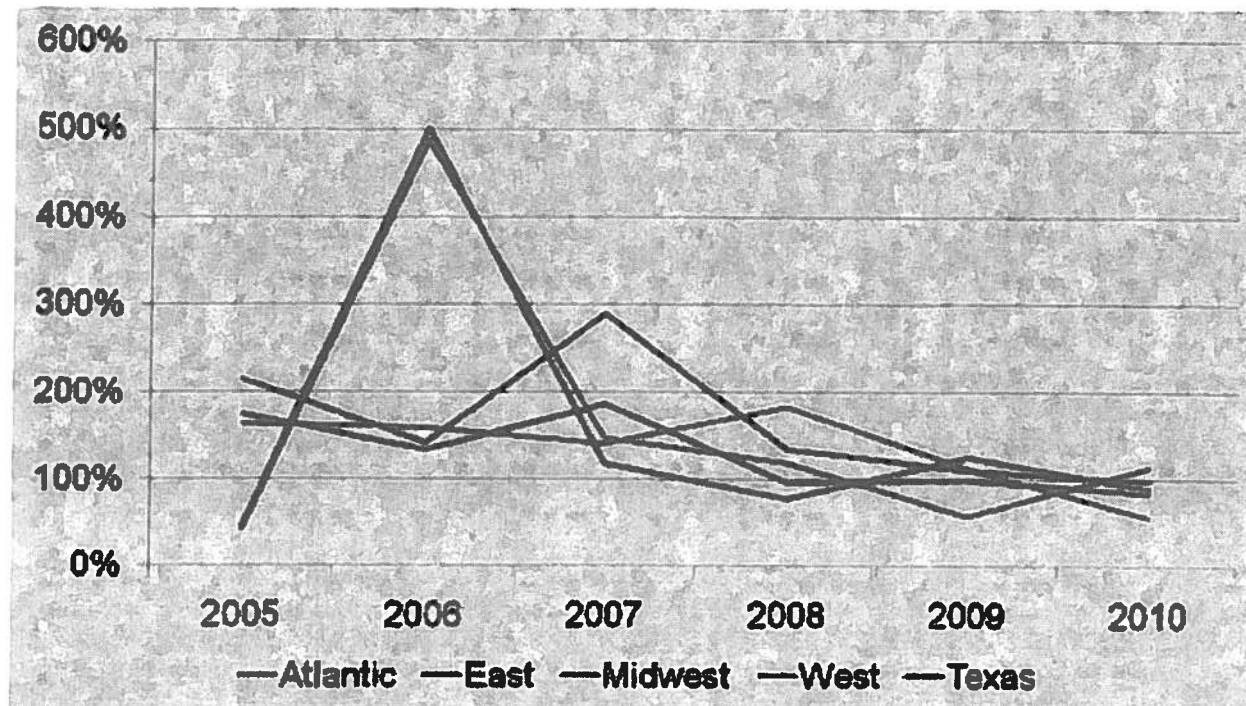

The BCEGS evaluation includes analysis of a jurisdiction's adopted code, including amendments, certifications of code officials, and staffing levels and workloads for residential and commercial construction plan review and inspection. In each category, the respective BCEGS criteria set optimal benchmark code adoption and enforcement activity levels.

An analysis of the related ISO BCEGS data shows a slowing trend of community-level code adoption — even during the construction boom. In 2002, the year before code groups published the 2003 code, 90 percent of departments adopted the 2000 code. In 2005, the year before the industry published the 2006 code, 50 percent of departments had moved to the 2003 code. Then in 2008, the year before the industry published the 2009 code, slightly more than 40 percent had moved to the 2006 code. It appears that just 30 percent of code agencies will adopt the 2009 code before the publication date of the next edition.

Those trends may well lead to more staff cutbacks or consolidation through private code-enforcement agencies. In many communities, the building-code department is a major source of revenue. When the department becomes a burden on the taxpayer, municipalities may curtail operations. In some places where code enforcement isn't mandatory, communities could eliminate their departments altogether. Remember that a department may have to cover inspection for years to come from the revenues it receives this year.

Figure 2: Revenues and Expenses by Region

Is the Economy Threatening Building-Code Effectiveness?

This chart represents the percentage of the current year's expenses covered by current year's income, for building-code departments in five regions. The department breaks even for the year at 100 percent. Funds collected in one year may have to fund inspection work on that project in the future. Texas only funded 58 percent of its cost in 2009, and for 2010, they are at 114 percent, or 28 percent short of revenue for the two years. Texas has had consistently high workloads compared to the other regions.

In anticipation of a slowdown or because of budgetary issues, a sizable number of communities cut back on staffing. The sharp rise in workload for 2009 and 2010 is an indicator of those cuts. Communities with smaller populations appear to have taken the most drastic reductions, while larger communities have been able to stay very close to BCEGS benchmarks. The largest communities were close to the ISO benchmark until they spiked in 2007. Note that ISO benchmarks are averages for the entire building-code department over the course of a year. For commercial plan reviews, the ISO benchmark is one plan review per plan reviewer. For residential plan reviews, the ISO benchmark is two plan reviews per plan reviewer.

Figure 3:
Residential Plan Review — Workload by Value per Reviewer

Is the Economy Threatening Building-Code Effectiveness?

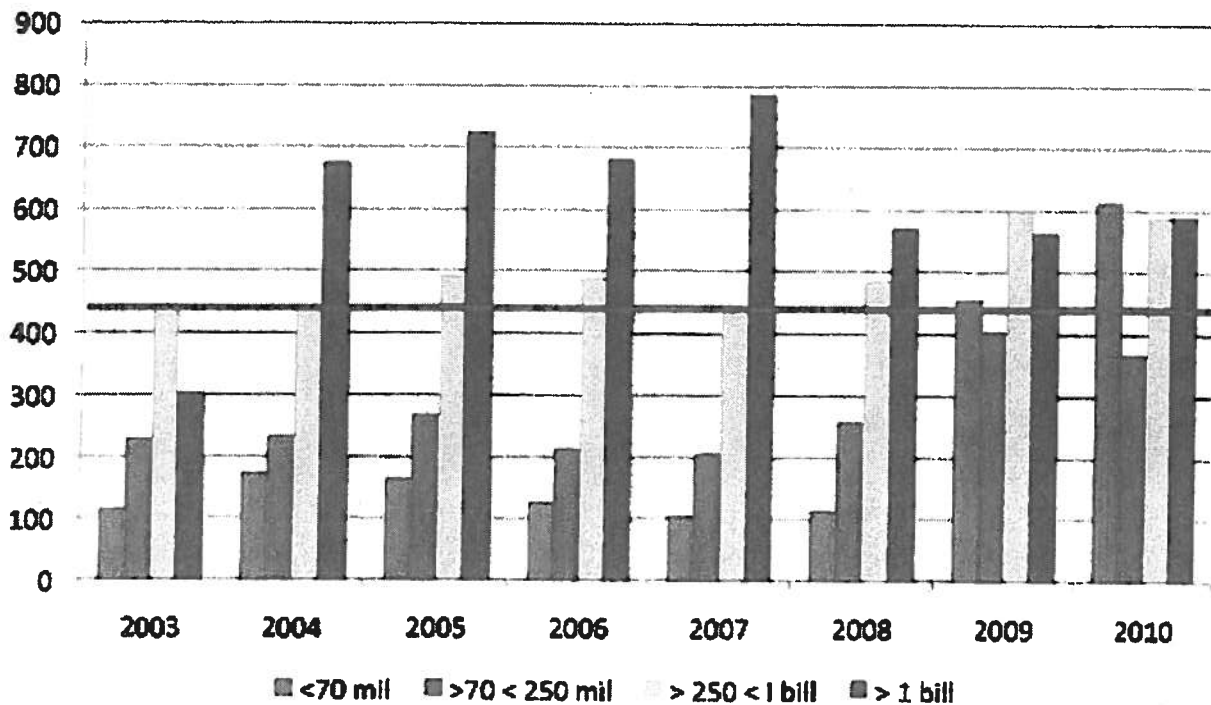

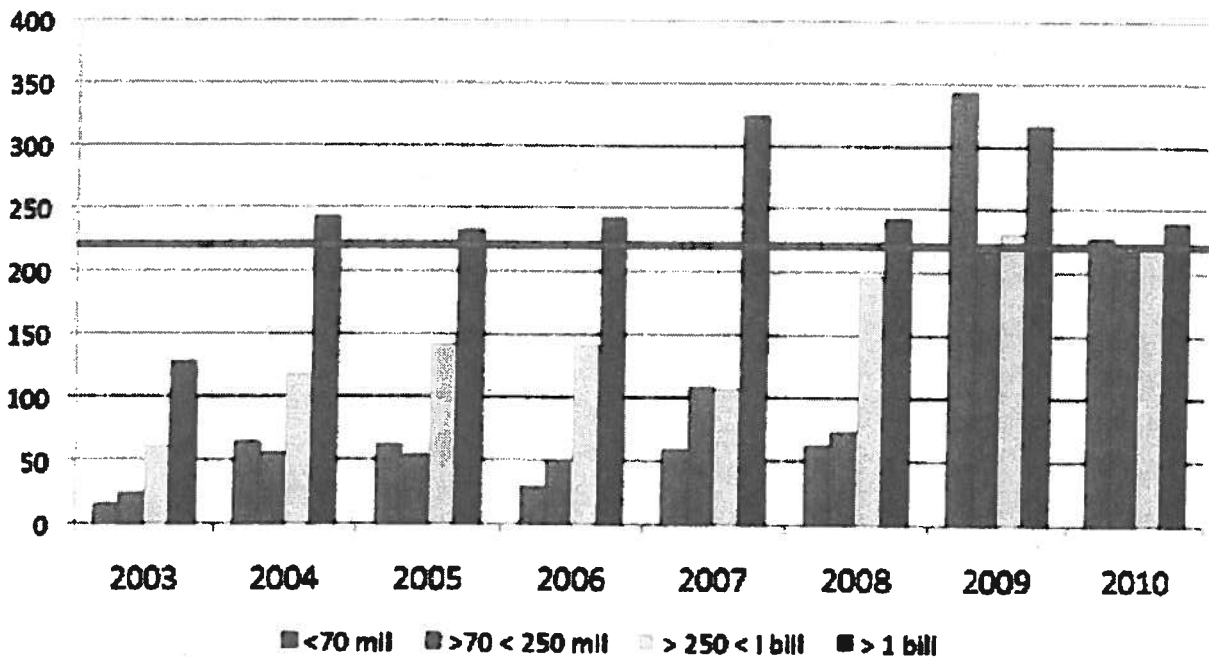

Figure 4:
Commercial Plan Review — Workload by Value per Reviewer

These charts illustrate the staffing trends described above. They depict the calculation of the total number of building plan reviews conducted in a year divided by the total number of plan reviewers employed that

year. For both residential and commercial plan reviews, the three categories of communities with values less than one billion dollars were close to or better than our benchmarks from 2003 to 2010. The thicker blue horizontal line represents the BCEGS benchmark.

Analysis of ISO BCEGS data demonstrates that the national code adoption and enforcement landscape varies significantly. But around the country, adoption of the latest code edition is slowing, so local code-enforcement agencies can't require the latest construction features despite the Intent of code-development groups. And to complicate the issue further, analysis of BCEGS data also reveals that the revenue-to-expense ratio of local building-code enforcement agencies is dropping. That means future budgets will be even harder to balance — leading to staffing and workload issues. Local community officials will need to make critical decisions to retain the integrity of the essential mission of code administration. ISO continues to monitor, evaluate, and report status of code effectiveness to insurers and the building-code community. It will be important for insurers to track those trends carefully with the BCEGS program. The future of code effectiveness may well hang in the balance.

Notes Concerning Alaska Building Codes

- The building codes listed below apply as a mandatory minimum for all buildings except 1, 2, or 3 family dwellings, unless otherwise indicated.
- Plans for all construction (except 1, 2, or 3 family dwellings) are reviewed at the state level except in the cities of Anchorage, Juneau, Fairbanks, Kenai, Seward, Kodiak, Sitka, and Soldotna. Plans for these cities should be submitted directly to the city.

Notes Concerning California Building Codes

California has adopted statewide, mandatory codes based on ICC's Uniform codes. Local jurisdictions may only amend the California Building Code to make it more stringent because of unique local climatic, geological or topographical conditions. All local amendments must be filed with the California Building Standards Commission.

The 2010 California Building Standards Code will adopt the 2009 I-codes and become effective on January 1, 2011.

California Building Codes

Elevator Code	California Elevator Safety Construction Code 2010 (California Code of Regulations, Title 8)	<u>Building Standards Commission</u>

Notes Concerning Colorado Building Codes

- Colorado does not have state building codes for commercial construction; codes are adopted at the local level.
- State of Colorado enforces codes for Factory-Built Residential and Non-Residential Structures. Information can be found [online](#).
- The State Buildings Programs (SBP) has adopted minimum requirements for all state-owned buildings and physical facilities including capital construction and controlled maintenance construction projects, outlined below.

Notes Concerning Connecticut Building Codes

Connecticut has adopted mandatory, statewide codes (see below). Connecticut's state codes cannot be amended locally. Copies of the Connecticut Supplements to the State Building Code and State Fire Code are available through the Commission on Official Legal Publications, (860) 741-3027, Phone; (860) 745-2178, Fax.

- The International Code Council has agreed to publish Connecticut Specific Editions of the 2003 International and Residential Codes that incorporate the language of the Connecticut Supplement into the base document. This eliminates the need for concurrent use of the Connecticut Supplement for these two codes. Available from: International Code Council, Inc., 4051 West Flossmoor Road, Country Club Hills, IL 60478-5795; Telephone: (888) 422-7233; www.iccsafe.org

- Connecticut's Division of Fire, Emergency & Building Services provides some code interpretations online.

2008 Amendments to the 2005 State Building Code and State Fire Code will be forthcoming in the 3rd quarter of 2008..

Florida Building Codes

Click to change region

Below you can find links to [Building Codes](#) and [Authorities Having Jurisdiction](#) for the state of **Florida**. To change to another state, click on the map to the right.

This information is obtained directly from the source -- the city, county and state building departments that issue these codes. If you find an error, please send an e-mail with the updated information to RCDWebmaster@ReedBusiness.com.

Notes Concerning Florida Building Codes

Florida has a statewide building code; under certain strictly defined conditions, local governments may amend requirements to be more stringent than the code.

The 2007 Florida Building Code becomes effective March 1, 2009. More information is available [here](#).

Florida Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	Florida Building Code 2007 (2006 IBC)	Online
Structural Code	Florida Building Code 2007 (2006 IBC)	Online
Plumbing Code	Florida Building Code 2007 (2006 IPC)	Online

Electrical Code	NEC 2005	Online
Fire/Life Safety Code	Florida Fire Prevention Code	Online
Accessibility Code	ADAAG (Florida State Accessibility Code) Local jurisdictions may not amend	Dept. of Community Affairs, (850) 487-1824
Energy Code	ASHRAE 90.1-2004 Local jurisdictions may not amend	Online
Elevator Code	2004 Florida Building Code	Bureau of Elevator Safety, (850) 488-9097 and online
Gas Code	2006 IFGC	Online
Boiler Code	ASME Boiler and Pressure Vessel Code	Online
Other Codes	Florida's Dept. of Health (DOH) has regulations pertaining to the construction of public swimming pools, hotels/motels, food establishments and health care facilities. In addition, all plans for the construction of public swimming pools must be reviewed and provided with a permit by the Dept. of Health before construction can begin. Check out the DOH Web site for details. Information also is available at: Florida Building Code Site .	

Florida Authorities Having Jurisdiction (AHJ)

Authorities Having Jurisdiction are those government officials who are the final authority on questions in a particular area (or jurisdiction).

Jurisdictional Area Contact

Structural	Div. of Codes & Standards, Dept. of Comm. Affairs <i>Phone:</i> (850) 487-1824 <i>Fax:</i> (850) 414-8436
Plumbing	Div. of Codes & Standards, Dept. of Comm. Affairs <i>Phone:</i> (850) 487-1824

Notes Concerning Georgia Building Codes

Georgia has fourteen "state minimum standard codes". Each of these separate codes typically consist of a base code and a set of Georgia amendments to the base code. Georgia law dictates that eight of these codes are "mandatory" (are applicable to all construction whether or not they are locally enforced) and two are "permissive" (only applicable if a local government chooses to adopt and enforce one or more of these codes). These codes are as follows:

Mandatory Codes:

- Standard Building Code (International Building Code)
- National Electrical Code
- Standard Gas Code (International Fuel Gas Code)
- Standard Mechanical Code (International Mechanical Code)
- CABO One and Two Family Dwelling Code (International Residential Code for One- and Two-Family Dwellings)
- Georgia State Energy Code for Buildings (International Energy Conservation Code)
- International Fire Code
- Standard Plumbing Code (International Plumbing Code)

Permissive Codes:

- Standard Housing Code (International Property Maintenance Code)
- Standard Existing Building Code (International Existing Building Code)

As noted above, the building, electrical, gas, mechanical, plumbing, CABO one-and-two family dwelling, energy and fire codes are mandatory codes, meaning that under Georgia law, any structure built in Georgia must comply with these codes, whether or not the local government chooses to locally enforce these codes. In addition, since Georgia law gives the enumerated codes statewide applicability, local governments do not have to adopt the mandatory codes in order to enforce them. However, the local government can choose which of the mandatory codes it wishes to locally enforce.

Notes Concerning Hawaii Building Codes

- Hawaii has very minimal state-wide building codes. Codes are adopted and enforced by each specific county.

Hawaii Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	State Building Code (IBC 2006)	
Structural Code	State Building Code (IBC 2006)	
Plumbing Code	State Plumbing Code (UPC 2006)	
Mechanical Code	Administrative Rules Title 11, Chapter 39, Air Conditioning & Ventilating Applies to all public buildings	Jerry Haruno, (808) 586-4701
Electrical Code	State Electric Code (NEC 2008)	N/A
Fire/Life Safety Code	Hawaii State Fire & Life Safety Code (2010) (NFPA 1, Uniform Fire Code 2006) Applies to all buildings except single family dwellings. Adoption at the local level is voluntary.	Building Dept. (808) 586-0526
Accessibility Code	ADAAG Applies as a mandatory minimum to public buildings and facilities	No amendments
Energy Code	ASHRAE 90.1 (Hawaii Model Energy Code) (IECC 2006) Mandatory for state-owned buildings	<u>Dept. of Business, Economic Development, and Tourism; Energy, Resources, and Technology Division</u> , (808) 586-2423
Gas Code	NFPA 54, 1988 (State Model Fire Code) Elective for all buildings	Bookstore, (808) 523-4780
Public Health Code	Hawaii Department of Health, Administrative Rules, Title 11	<u>Online</u>

Honolulu Hawaii Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	UBC 1997	Permitting & Planning, (808) 523-4432 and <u>online</u> .
Structural Code	UBC 1997	Permitting & Planning, (808) 523-4432 and <u>online</u> .
Plumbing Code	UPC 1997	Permitting & Planning, (808) 523-4432 and <u>online</u> .
Electrical Code	NEC 2002	Permitting & Planning, (808) 523-4432 and <u>online</u> .
Fire/Life Safety Code	UFC 1997	Permitting & Planning, (808) 523-4432 and <u>online</u> .
Energy Code	ASHRAE 90.1 (Hawaii Model Energy Code)	<u>Dept. of Business, Econ. Dev. & Tourism,</u> <u>Energy Division, (808) 587-3811</u>

Notes Concerning Idaho Building Codes

• Idaho codes listed below are mandatory minimums. Local jurisdictions may amend to make more stringent.

Idaho Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	IBC 2009	<u>Online</u>
Structural Code	IBC 2009	<u>Online</u>
Plumbing Code	UPC 2003	Plumbing Bureau, (208) 332-8985 or <u>Online</u>

Notes Concerning Indiana Building Codes

Indiana has adopted mandatory, statewide building codes. Local jurisdictions may adopt more stringent regulations only with the approval of the Indiana Fire Prevention and Building Safety Commission.

The 2010 Indiana Energy Conservation Code (ASHRAE 90.1, 2007) will be effective May 6, 2010.

Indiana Building Codes

Notes Concerning Kansas Building Codes

- All ordinances and requirements for construction and related permits are contained in the Code of the City of Wichita, Kansas (CCWK). The CCWK adopts by reference nationally recognized construction codes with local amendments, as indicated below.
- General contractors must be licensed by the City of Wichita. License approval is based on successful passage of ICBO or Block & Associates written examinations or a one-time license being granted by the Board of Code Standards and Appeals. Contact the Contractor Licensing Dept.; (316) 268-4413, Phone; (316) 268-4463, Fax.
- Site plans should be reviewed for code compliance. Contact the Office of Central Inspection, (316) 268-4460, Phone; (316) 268-4663, Fax.
- A guide to building and construction is [online](#).

Notes Concerning Kentucky Building Codes

Kentucky has adopted statewide, mandatory building codes. Local jurisdictions may not amend the state code.

The new 2007 Kentucky Building Code (KBC), ninth edition went into effect July 6, 2007. The ninth edition of the KBC will be the 2006 International Building Code (IBC) and the specific Kentucky amendments (2007 KBC) to the 2006 IBC.

Notes Concerning Maryland Building Codes

Maryland's law related to building codes is called the Maryland Building Performance Standards (MBPS). It requires each jurisdiction in Maryland to use the same edition of the same building codes that are the International Building Code (IBC) and the International Residential Code (IRC). The State has modified the IBC and the IRC to coincide with other Maryland laws. The International Code (IBC) and International Residential Code (IRC) with modifications by the State constitute the Maryland Building Performance Standards (MBPS).

Maryland Building Codes

Notes Concerning Minnesota Building Codes

• Minnesota has adopted a statewide, mandatory building code, the Minnesota State Building Code. Local jurisdictions may only adopt the state code. Only the fire code can be locally amended with more stringent provisions.

Minnesota will not be adopting the 2009 I-codes. Memo with details [here](#).

Notes Concerning Mississippi Building Codes

• The state of Mississippi does not have a statewide building code. Building code adoption and enforcement is primarily the responsibility of local jurisdictions. Mississippi does require that state buildings meet the requirements set forth in the 1997 Standard Building Code, mandatory for all jurisdictions. • In 2006, Bill 31-11-33 created the Mississippi Building Code Council, and requires five coastal counties, Jackson, Harrison, Hancock, Stone and Pearl River to enforce, on an emergency basis, all of the wind and flood mitigation requirements prescribed by the 2003 International Building Code and the 2003 International Residential Code.

Notes Concerning North Dakota Building Codes

- The codes listed below apply as a mandatory code to all buildings, if the local jurisdiction adopts a code. Exceptions are noted in the table.

North Dakota Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	IBC 2006	Cal Steiner phone: (701) 227-7415 fax: (701) 227-7415
Structural Code	IBC 2006	Cal Steiner phone: (701) 227-7415 fax: (701) 227-7415
Plumbing Code	UPC 2000 Applies to all buildings as a mandatory minimum	State Plumbing Board, (701) 328-9979
Mechanical Code	IMC 2006	Cal Steiner phone: (701) 227-7415 fax: (701) 227-7415
Electrical Code	NEC 2005 (North Dakota Wiring Standards) Applies as a mandatory minimum to all buildings	State Electrical Board, (701) 328-9522
Fire/Life Safety Code	UFC 2003; NFPA 101, 2003 Life-safety applies to all existing schools and public assemblies.	Fire Marshal's Office, (701) 328-5555
Accessibility Code	ADAAG (ND Century Code, State Building Code Chapter 54-21.3-04.1) Applies to all buildings as referenced in the ADA.	No amendments
Energy Code	MEC 1993; ASHRAE Standard 90.1-1989 for commercial structures	No amendments
Elevator Code	None	N/A
Gas Code	IFGC 2006	Cal Steiner phone: (701) 227-7415 fax: (701) 227-7415

Notes Concerning Ohio Building Codes

• Ohio has adopted a statewide, mandatory code, the Ohio Building Code (OBC). The OBC applies to all buildings except: single-family, two-family and three-family dwellings; U.S. government and military structures; and agricultural buildings. The Ohio Administrative Code is found [here](#).

Notes Concerning Ohio Building Codes

Ohio has adopted a state-wide building code, the Ohio Building Code (OBC). Copies are available from ICC, (800) 786-4452. An electronic version of Akron's code can be found here.

All projects located within the City of Akron must contact Akron Plans and Permits at (330) 630-7305 or (330) 375-2010 for compliance requirements. The County of Summit, Building Standards Division is responsible for all plan reviews, permits, and inspections related to the Construction, Alteration and Repair for all structures located within the City of Akron, in regards to the Ohio Building Code (OBC) and the Residential Code of Ohio (RCO). The phone # for the Building Standards office is 330-630-7280.

Pennsylvania has a statewide building code, the Uniform Construction Code (UCC), which will be administered and enforced locally and at the state level.

Note: Pennsylvania has adopted the 2009 I-Codes, effective December 31, 2009. If a design or construction contract for proposed work was signed between December 31, 2006 and December 30, 2009, the 2006 International Codes must be complied with.

Notes Concerning South Carolina Building Codes

- South Carolina requires that every local jurisdiction adopt a code and mandates which code the local government must adopt, making the codes listed below mandatory throughout the state. Local jurisdictions may amend the codes to make them more stringent with the approval of the Building Codes Council (BCC).

- Enforcement and interpretation of each of the codes (building, mechanical, electrical, *etc.*) is the responsibility of the local governments.

On March 22, 2010, the SC BCC formally adopted the 2009 I-codes with an implementation date of January 1, 2011. More info [here](#).

Notes Concerning Washington Building Codes

- Washington has adopted a statewide building code, State Building Code (SBC). The building, plumbing, mechanical, electrical and fire codes are mandatory minimum codes for all jurisdictions. The SBC is incorporated in the Washington Administrative Code (WAC) in several chapters (see below for specific numbers).
 - Washington updates its codes every three years.
- The adoption of the 2009 International Building, Residential, Mechanical and Fire Codes and the 2009 Uniform Plumbing Code, with state amendments, will be effective on July 1, 2010, along with amendments to the Washington State Energy Code.

Washington Building Codes

Boiler Code	Wisconsin Commercial Building Code, Chapter 41	State Document Sales, (800) 362-7253 and online

Notes Concerning Wyoming Building Codes

- Wyoming's codes listed below apply as a mandatory minimum to all buildings unless otherwise indicated. Local jurisdictions can amend the codes to make them more stringent.
- Wyoming updates its code every three years immediately following the publication of the model code.

Wyoming Building Codes

Code Type	Code Model	Amendment Contact
Building/Dwelling Code	IBC 2006 Applies to hotels/motels, restaurants, schools, state-owned and publicly-funded buildings	No amendments
Structural Code	IBC 2006 Applies to hotels/motels, restaurants, schools, state-owned and publicly-funded buildings	No amendments
Mechanical Code	IMC 2006 Applies to hotels/motels, restaurants, schools, state-owned and publicly-funded buildings	No amendments
Electrical Code	NEC 2008	No amendments
Fire/Life Safety Code	IFC 2006 w/Appendix D, E, F and G Applies to hotels/motels, restaurants, schools, state-owned and publicly-funded buildings	No amendments
